

PolyOrganize

Workflow-driven Product Lifecycle Management

Streamline Your Product Development Process

PolyOrganize is a workflow driven Product Lifecycle Management (PLM) system for the fashion and apparel industries. It provides a tight but flexible organization of product specifications modeled after the actual workflow.

PolyOrganize is a carefully designed information system which allows you to:

- quickly evaluate alternatives in terms of style and cost
- track modifications and status of specifications
- keep track of deadlines and generate action plans
- locate critical information by searching across styles using any criteria
- design and deliver system-wide reports via GUI interface
- effortlessly communicate up-to-the-minute information to trading partners anywhere in the world
- seamlessly integrate with your CAD, MRP, and ERP systems
- fully automate sample room production management by tracking orders, samples, and material allocation

Choose PolyOrganize to achieve immediate, tangible performance improvements

- reduced product development cycle time
- reduced costs in sample production
- reduced task redundancies
- reduced product revisions
- improved communications
- improved efficiency and consistency of product specifications
- improved information flow throughout the enterprise
- improved supply chain management

PDM - PLM

Workflow Driven

PolyOrganize is work-flow driven, not data-driven. This means that important information can be treated differently from unimportant information, and that the system can manage the partially-specified information and continuous refinement of specifications that take place throughout product development. Working with PolyOrganize helps to structure the development process without restricting the creative process. Its integrated workflow module breaks down the collection development process into separate steps with clearly defined tasks for each user, and provides tools to ensure that tasks are completed on time.

Out-of-the-Box Implementation

PolyOrganize is an out-of-the-box PLM solution, designed specifically for the apparel industry, requiring minimal installation and setup times. It is customizable by the non-specialist, and there are no extra costs in database administration. Its easy, consistent, and comfortable interface reduces learning time.

Integration

In addition to providing a general-purpose, scriptable import/export mechanism for any data in the system, PolyOrganize can be dynamically integrated with any application using standards such as ODBC and SQL.

Optional Modules

The product lifecycle begins with the creative process and the refinement of specifications, extends to sample production, approvals, and revisions, and eventually results in a final product specification. PolyOrganize includes optional software modules which cover all the remaining activities in the product lifecycle - from the customer order to the final delivery of the finished product and customer invoicing.

The additional modules can be used either as an enterprise solution for tracking orders, production, and inventory, or they can be used to improve the management of the sample development department itself, which in many organizations also functions as a mini-production department.
