

## Prepare & Plan

Dynamically display your orders from different view points. Production information is ready from the integrated PLM. Generate time and action plans.

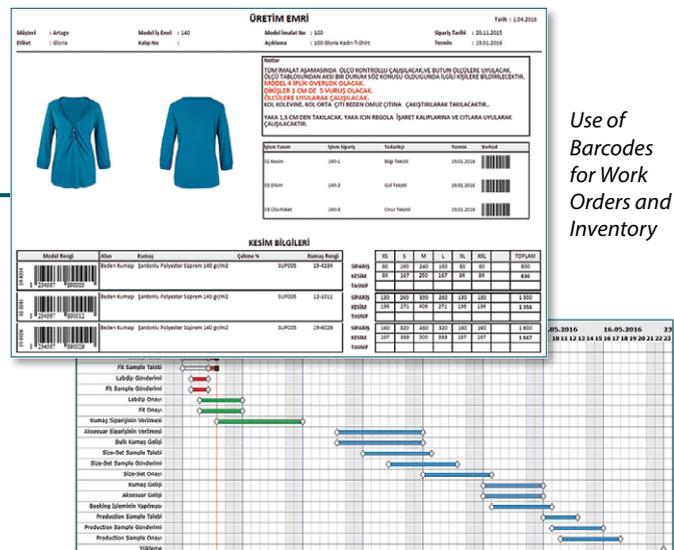

Weekly Deliveries by Brand

Calendar Tracking of Purchases and Deliveries

## Execute

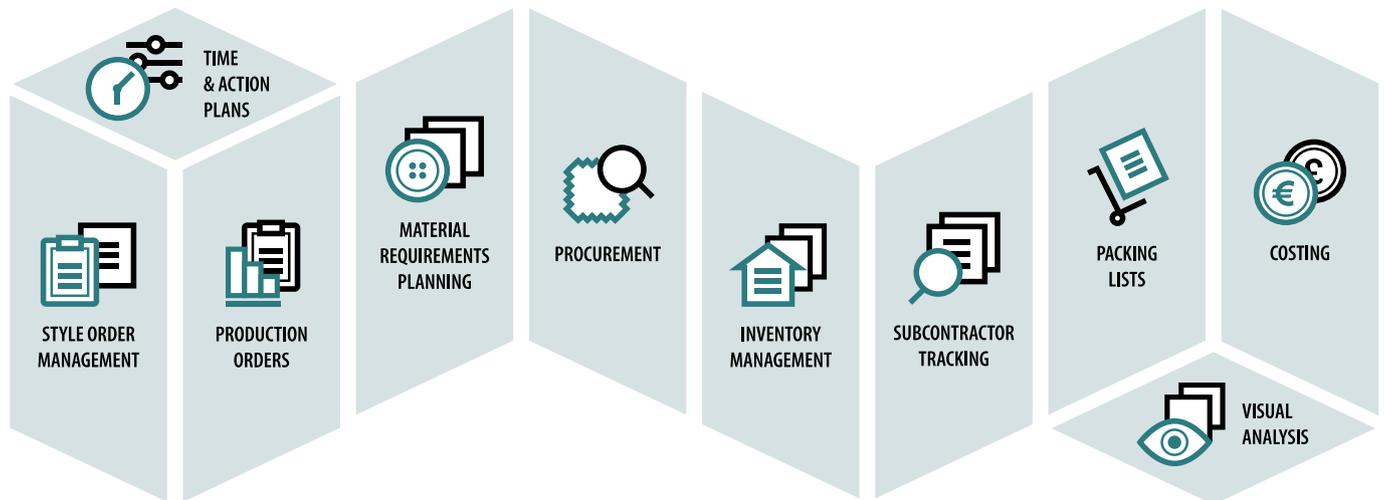

Automatically generate work orders, purchase orders, and all related production documents. Stock moves as production documents are easily transformed from one phase to the next.

Use of Barcodes for Work Orders and Inventory

## Monitor & Analyze

Manage your production processes, in-house or outsourced, in terms of time schedules, quantities, and quality. Use drill down views to get a clear overview of all orders and their status and quickly spot issues.

## Increase On Time Delivery, Productivity, and Visibility

- **Integrated PLM:** Go from concept to production with no bottlenecks.
- **Highly Visual Interface:** Use style and material images everywhere.
- **Transparent Stock Management:** Track real and projected stock quantities.
- **Automatic Data Propagation:** Minimize data entry and reduce human error.
- **Management of Complicated Production Scenarios:** Control all processes from yarn to finished garment.
- **Flexibility in Information Flow:** Enter partial data and refine later as information becomes available.
- **Flexibility in Details:** Specify details only on the level you want to monitor, leave out the details for non-essential processes.
- **Flexibility in Visibility:** Dynamically change levels and views of order and production information.
