

# PolyPattern

Simple, but not Simplistic

Complex, but not Complicated

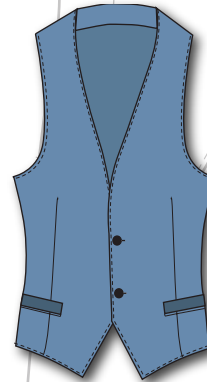

## Three Reasons to Choose PolyPattern

### Performance

The first thing you'll notice about PolyPattern is that there are few objects on the screen. As you work, you'll notice that there is no tiring array of windows and check boxes with endless options. That's because PolyPattern, from pattern design and grading to automatic marker making, offers **thoughtfully designed tools, advanced features, and intelligent automation** that ensure that you work quickly and efficiently, with perfect ease and precision. The result is a working environment with truly **accessible functionality** - you'll use all of PolyPattern's features, because you'll **know how to**.

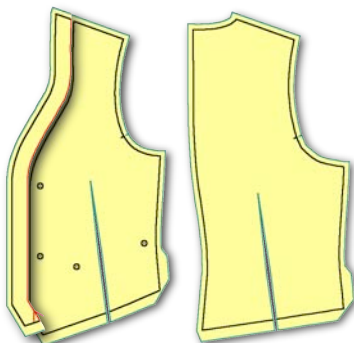

#### For your business, that means:

- You will save time in all aspects of pattern and marker making.
- You'll save fabric from AutoMarker optimizations.
- You will avoid production bottlenecks by designing your patterns directly in your CAD system, resulting in:
  - production-ready pattern data at the same time as the sample development
  - quick and accurate fabric costing, so that the right amount of fabric is ordered.

### Compatibility

PolyPattern runs under both MacOS® and Windows® operating systems. PolyPattern exchanges data with other CAD systems via the international standards AAMA and ASTM, reads native format data from Lectra, Investronica, and Gerber, and communicates with most plotters, digitizers, cutters, databases, spreadsheets, and software applications.

#### For your business, that means:

- You can choose equipment that suits your needs at every phase of your company's development.
- You can choose customers and suppliers freely, without concern for what CAD system they use.

### A Complete and Flexible Solution

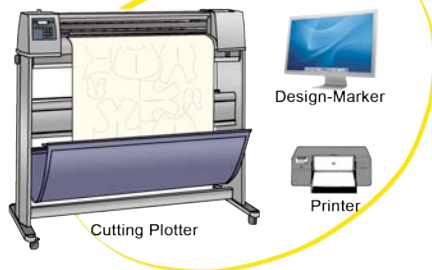

PolyPattern is complete software whose modular design allows you to configure the software to exactly the modules you need. It offers affordable upgrades from basic to advanced and special-purpose modules according to your needs.

#### For your business, that means:

- Your CAD/CAM system will adjust smoothly and affordably according to your needs.
- Your investment in PolyPattern is guaranteed to last long into the future.

CAD/CAM SOLUTIONS

## Small Scale Solutions

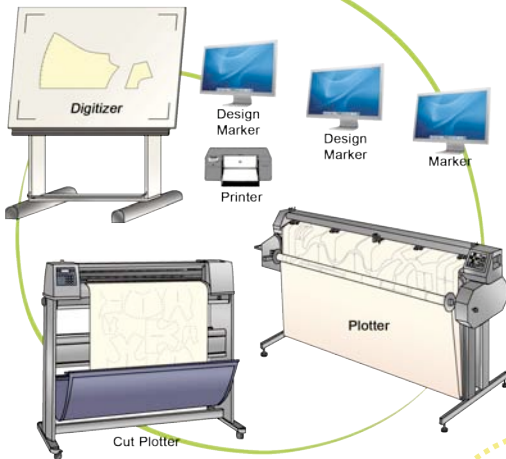

# SOLUTIONS

### No matter

what your current setup is,  
what the size of your operation is,  
how you run your operation,

**there is a PolyPattern  
solution to fit.**

## Medium Scale Solutions

Whether you are a pattern design bureau, a small or medium size manufacturer, or a large size manufacturer whose operations take place in more than one location, we have a solution you'll be pleased with.

**PolyPattern's modules include:**

- PolyPattern-Design
- PolyPattern-Design Pro
- PolyPattern-Marker
- PolyPattern-AutoMarker
- PolyPattern-Database
- PolyPattern-MadeToMeasure
- PolyPattern-Export
- PolyPattern-ISOCut
